Successful introduction of the new Coatema-Smartcoater during Printed Electronics Europe

Thomas Kolbusch, Vice President

For the first time Coatema introduced a new and revolutionary plant concept live during the Printed Electronics Europe 2010 in Dresden. The multifunctional Smartcoater includes 5 coating and printing systems, a 350 mm hot air dryer in EEx-layout and a lamination device. A small working width of 100 mm and compact dimensions allow a minimum use of substrates and chemistry.

More than 800 visitors came to get a first impression of the Smartcoater and an overview on the benefits of this multifunctional unit. The interest and requests for quotes exceeded all expectations.

The Smartcoater is set-up in our R&D Centre in Dormagen. Here we have 11 different pilot lines and 1 production line with a working width of 2.000 mm available and you are cordially invited to visit us in Dormagen (near to Cologne and Düsseldorf).

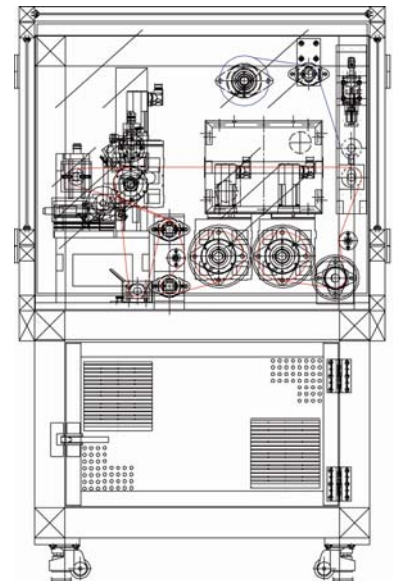

The Smartcoater is equipped with a process control system with Siemens S7 and tension measurement rollers.

The Smartcoater - all around a successful concept which will be upgraded for the operation with hotmelts and in inert atmosphere.

Further information can be found at www.coatema.de. Please don't hesitate to contact us with any questions you may have (by phone: +49 21 33 / 97 84 - 0 or by email info@coatema.de).
